NATIONAL CENTER FOR EDUCATIONAL STATISTICS (DHEW)

REPORT NUMBER TH-49

PUB DATE 29 DEC 67

EDRS PRICE MF-\$0.50 HC-\$3.08 75P.

DESCRIPTORS- \*FACTOR ANALYSIS, \*ELEMENTARY SCHOOL TEACHERS,  
\*SECONDARY SCHOOL TEACHERS, TEACHER SALARIES, RACIAL BALANCE,  
\*QUESTIONNAIRES, CORRELATION, \*TEACHER CHARACTERISTICS,  
TEACHER BACKGROUND, TEACHER EXPERIENCE, TEACHING CONDITIONS,  
SOCIOECONOMIC BACKGROUND, TEACHER EDUCATION, COMPUTER  
ORIENTED PROGRAMS, SURVEYS, EDUCATIONAL OPPORTUNITIES,  
DISTRICT OF COLUMBIA,

THIS REPORT PRESENTS INTERCORRELATIONS AND FACTOR  
ANALYSES OF ITEMS FROM THE TEACHER QUESTIONNAIRE ADMINISTERED  
AS PART OF THE EDUCATIONAL OPPORTUNITIES SURVEY. THE  
CORRELATIONS AMONG SELECTED ITEMS FROM THE 102-ITEM TEACHER  
QUESTIONNAIRE WERE COMPUTED TO (1) DISPLAY THEIR  
INTERRELATIONSHIPS, (2) DOCUMENT THEM FOR OTHER RESEARCHERS,  
AND (3) SERVE AS A BASIS FOR FACTOR ANALYSES. FACTOR ANALYSES  
WERE CONDUCTED TO REDUCE THE NUMBER OF ITEMS IN AN  
EMPIRICALLY MEANINGFUL WAY, THUS REDUCING THE VOLUME OF DATA  
PROCESSING AND COMPLEXITY OF LATER ANALYSES. ALL ANALYSES  
WERE CONDUCTED FOR BOTH ELEMENTARY AND SECONDARY TEACHERS  
USING 45 VARIABLES. AGE, SIZE OF COMMUNITY IN WHICH THE  
TEACHER SPENT MOST OF HIS LIFE, HIGHEST DEGREE HELD, NUMBER  
OF CREDITS BEYOND THE HIGHEST DEGREE, YEARS OF TEACHING  
EXPERIENCE, YEARS TEACHING IN PRESENT SCHOOL, CERTIFICATION,  
EMPLOYMENT STATUS AND PLANS TO TEACH UNTIL RETIREMENT WERE  
FOUND TO BE MODERATELY CORRELATED WITH THE TEACHER'S SALARY.  
PRINCIPAL COMPONENTS ANALYSES OF THE INTERCORRELATIONS AND  
VARIMAX ROTATIONS OF THE FACTORS YIELDED EIGHT MEANINGFUL  
FACTORS--EXPERIENCE, TEACHING CONDITIONS, LOCALISM OF  
BACKGROUND, SOCIOECONOMIC BACKGROUND, TRAINING, COLLEGE  
ATTENDED, TEACHING RELATED ACTIVITIES, AND PREFERENCE FOR  
STUDENT ABILITY LEVEL. EA 001 195 IS A RELATED DOCUMENT. (HW)

## Correlational and Factorial Analyses of Items From the Educational Opportunities Survey Teacher Questionnaire

### INTRODUCTION

The following report presents intercorrelations and factor analyses of items from the teacher questionnaire administered as part of the Educational Opportunities Survey (EOS), (see List of References). The correlations among selected items from the teacher questionnaire were computed in order to: (1) display their inter-relationships; (2) to document them for other researchers; (3) and to serve as a basis for the factor analyses. The factor analyses were conducted to reduce the number of items in an empirically meaningful way so that the volume of data processing and complexity of later analyses would be reduced. By empirically meaningful is meant that groups of variables (or factors) would be sought that correlated substantially with one another and very little with other variables but that were also psychologically or sociologically meaningful.

All analyses were conducted for two groups of teachers labeled ELEMENTARY and SECONDARY. The two groups of teachers were selected on the basis of their response to a question concerned with their highest grade taught (question 59). Thus those who said they taught the ninth grade or higher are included in the group of 9th to 12th grade teachers which has been labeled SECONDARY. Similarly, those who said they taught the eighth grade or less are included in the group of kindergarten through 8th grade teachers which has been labeled ELEMENTARY.

### LIST OF VARIABLES

The teacher questionnaire contained 102 questions. Seventy-two of these were concerned with a wide variety of questions relating to the teacher's education, work experience, working conditions, preference for different kinds of students, involvement in guidance activities, opinions on social issues, etc. The latter part of the teacher questionnaire consisted of a thirty item contextual vocabulary test. Twenty-six of these first seventy-two items were deleted from the analyses because they were regarded as being too specialized or could be best retained as single items for special studies or were of peripheral interest. Thus many of the items concerned with integration were judged to be best kept as single items for special studies and many of the counseling questions were of peripheral interest to the investigators.

The list of variables used in the analyses and the manner in which they are coded are given below.

The detailed numerical codes used and the value assigned for a response when a person failed to respond to a particular question (non-response)

are given in Appendix A. Results of earlier analyses of the percent of teachers responding to each question and their average verbal score were used as a guide in deciding how to code non-responses (see Mayeske, et. al. in the List of References for these analyses and the actual questions from the questionnaire).

<u>Variable Number</u>	<u>Title</u>	<u>Manner of Coding</u>
1	Sex	One for female, zero for male.
2	Age	High value indicates older age.
3	Area Spent Most of Life	High value indicates individual spent most of life in another area or State.
4	Type/Size of Community Spent Most of Life	High value indicates urban and suburban.
5	Racial-Ethnic Differences on Contextual Vocabulary	Each person was assigned the mean verbal score of his own race or ethnic group. A high value indicates white while a low score indicates Negro and Puerto Rican.
6	Area Graduated from High School	High value indicates graduation from a high school in another area or State.
7	Father's Occupational Level	High value indicates professional, managerial and sales occupations. Low value indicates unskilled or farm worker.
8	Father's Educational Level	High value indicates much education.
9	Mother's Educational Level	High value indicates much education.
10	Highest Degree Held	High value indicates higher degree.
11	Undergraduate Institution Attended	The item response categories were ranked by the magnitude of the

<u>Variable Number</u>	<u>Title</u>	<u>Manner of Coding</u>
		teacher's verbal score, assigning a high rank to a high verbal score. Each respondent was assigned the rank for the item response he chose. A high score indicates a high rank.
12	Highest Degree Offered by Undergraduate Institution	Same as variable 11.
13	Area of Undergraduate Institution	High value indicates institution is located in another area or State.
14	Percent of White Students at Undergraduate Institution	High value indicates many white students.
15	Ranking of Academic Level of Undergraduate Institution	High value indicates the teacher feels that his undergraduate institution has a high academic standing.
16	Credit Beyond Highest Degree	High value indicates many credits beyond highest degree.
17	Years of Teaching Experience	High value indicates many years experience.
18	Years of Teaching in Present School	High value indicates many years experience in present school.
19	Certification	High value indicates permanent or long-term certification.
20	Assignment to Present School District	A value of one was assigned if they chose their present school, zero if they were placed in the school.
21	Attend Summer Institutes	High value indicates teacher has attended many NSF-NDEA-ESEA sponsored institutes.

<u>Variable Number</u>	<u>Title</u>	<u>Manner of Coding</u>
22	Attend Summer Institutes for teaching culturally disadvantaged	High value indicates teacher has attended 2 or more summer institutes.
23	Annual Teaching Salary	High value indicates a high salary.
24	Student Effort	High value indicates teacher feels students in present school try hard to achieve.
25	Student Ability	High value indicates teacher feels students in present school are of high academic ability.
26	Employment Status	High value indicates a tenured appointment.
27	Member National Honorary	One for yes, zero for no.
28	Re-enter Teaching	High value indicates the teacher would re-enter teaching as a profession.
29	Prefer Other School	High value indicates the teacher would prefer to teach in some other school.
30	Type High School Preferred	High value indicates the teacher would prefer an academic school with strong emphasis on college preparation. Low value indicates preference for trade or vocational school.
31	Socio-Economic Background of Student Preferred	High value indicates a preference for children of professional and white collar workers. Low value indicates preference for children of blue collar and farm workers.

<u>Variable Number</u>	<u>Title</u>	<u>Manner of Coding</u>
32	Preference for Student Ability	High value indicates preference for a high ability group.
33	School Reputation	High value indicates that the teacher feels his present school is highly regarded by other teachers <u>not</u> in the school.
34	Percent White of Teacher's Students	A high value indicates that the teacher has a high percentage of white students in his classes.
35	School Problems: External	A high value indicates many school problems that are external to the school such as: poor home environment of students; students are poorly fed and clothed; parents put too much pressure on the students for grades, etc.
36	School Problems: Internal	A high value indicates many school problems that are internal to the school such as: racial tension; excessive emphasis on athletics; excessive competition for grades; excessive student absences, etc.
37	Member of Teachers Associations	A high value indicates that the teacher is an officer or an active participant in a teachers association. A low value indicates non-membership.
38	Reads Educational Journals	A high value indicates the teacher regularly reads 3 or more journals. A low value indicates the teacher is not a regular journal reader.

<u>Variable Number</u>	<u>Title</u>	<u>Manner of Coding</u>
39	Teach Until Retirement	A high value indicates the teacher expects to remain in full-time public education until retirement.
40	Hours a Day Spent in Class Preparation	A high value indicates that the teacher spends 4 or more hours a day, outside of the regular working day, in preparation for teaching or counseling. A low value indicates no preparation.
41	Hours a Day Spent in Classroom Teaching	The item response categories were ranked by the magnitude of their verbal score, assigning a high rank to a high verbal score. Each respondent was assigned the rank for the item response he chose. A high score indicates a high rank.
42	Average Class Size	Teachers who had an average class size of approximately 12 to 35 students were assigned a one; all larger and smaller class sizes were scored zero (teachers were required to grid their answer to this question and this procedure introduced errors). Teachers who taught less than 3 hours a day were omitted from the analysis of this variable.
43	Hours a Day Spent in Counseling	A high value indicates that the teacher spends many hours in addition to his official assignment, in counseling. Teachers who taught less than 3 hours a day were omitted from the analysis of this variable.

<u>Variable Number</u>	<u>Title</u>	<u>Manner of Coding</u>
44	Ability Grouping	A high value indicates that the teacher has all high ability groups. An intermediate value indicates mixed ability groups and a low value, low ability groups.
45	Contextual Vocabulary Score	A high value indicates many items correct.

These variables were intercorrelated using a computer routine that allows for an unequal number of observations on each variable. There are two occasions when an unequal number of observations on a particular variable or item may occur. The first is when a question is answered twice and consequently the missing data routine eliminates both responses. An example of this is when an individual changed his answer and either forgot to erase or inadequately erased his first response. A second occasion is when an item alternative or a non-response group was purposely eliminated. Thus, those teachers who did not indicate their sex or age were not assigned a non-response value but were rather deleted from the computation of the correlation of these variables with the other variables (see Appendix A for the alternatives that were eliminated). The means, standard deviations and intercorrelations for these variables are given in Appendix B. The school sampling weights were used to reproduce teacher population values. There are approximately 36,000 ELEMENTARY and 24,000 SECONDARY teachers in the sample. When inflated by the sampling weights an estimate of approximately 830,000 ELEMENTARY and 556,000 SECONDARY teachers is obtained.

#### DISCUSSION OF SOME SELECTED CORRELATIONS Correlates of Teacher Salary

Teachers salaries have been and continue to be of considerable interest. Some investigators have focused on increases in teachers salaries as a means of attracting and retaining more capable people into the teaching profession. Therefore it may be useful to focus on correlates of other items from the teacher questionnaire with teaching salary (variable 23 in the List of Variables). Table 1 presents these correlations for both elementary and secondary teachers. As a rule of thumb only correlations of .20 or greater are presented (except where a comparison of elementary and secondary teachers requires that a lower value be presented).

TABLE 1.-Correlates of Teachers Salary

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ZERO-ORDER CORRELATIONS</u>	
		<u>ELEMENTARY</u>	<u>SECONDARY</u>
2	Age	.28	.41
4	Type/Size Community Spent Most of Life	.20	.22
10	Highest Degree Held	.34	.45
16	Number of Credits Beyond Highest Degree	.36	.40
17	Years of Teaching Experience	.32	.47
18	Years of Teaching in Present School	.25	.39
19	Certification	.33	.33
26	Employment Status	.42	.46
39	Teach Until Retirement	.19	.30

Inspection of Table 1 shows that the same variables are correlated with salary levels for both elementary and secondary teachers but that the correlations tend to be somewhat higher in almost every case for the secondary teachers. These variables are the ones that one would expect to be related to salary levels. Thus, the higher salaried teachers tend to have more teaching experience (variable 17), are older (2), have a higher degree (10) and/or credits beyond a higher degree (16), have achieved certification (19) and tenured employment status (26), plan to stay in teaching until retirement (39) and have taught many years in their present school (18). The relationship of variable 4 to salary suggests that the teachers with a more urban background receive higher salaries because they teach in urban and suburban schools where the salary schedule is higher than in rural and small town school systems.

### CORRELATES OF PERCENT OF WHITE STUDENTS IN TEACHERS CLASS

A number of studies concerned with the effects of integration have focused on the percent white or racial mix of a school. Some investigators have expressed the concern that even though a school may be integrated the classrooms may be segregated. It is of interest therefore to see what other items from the teacher questionnaire correlate with item 43, which is a measure of classroom integration. As a rule of thumb correlations of .20 or greater were selected for discussion and are presented in Table 2.

TABLE 2.-Correlates of Percent of White Students in Teachers Class

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ZERO-ORDER CORRELATIONS</u>	
		<u>ELEMENTARY</u>	<u>SECONDARY</u>
5	Racial-Ethnic Differences on Vocabulary Test	.65	.61
14	Percent of White Students at Teachers Undergraduate Institution	.61	.60
24	Student Effort	.28	.26
25	Student Ability	.31	.26
35	School Problems: External	-.30	-.22
36	School Problems: Internal	-.33	-.24
45	Score on Vocabulary Test	.29	.25

Table 2 shows that the same variables correlate with percent of white students in the class for both elementary and secondary teachers and that the correlations are of approximately similar magnitudes. Inspection of Table 2 reveals that white teachers tend to teach predominantly white classes (5), white teachers attended undergraduate institutions that were predominantly white (14) and that those teachers who teach predominantly

white students obtain higher vocabulary test scores than do teachers of non-whites (45). Teachers of predominantly white students in contrast to teachers of non-whites, feel that their students try harder in school (24), have greater academic ability (25) and have fewer school problems, both internal and external (35, 36).

## FACTOR ANALYSES-PROCEDURES AND RESULTS

### Procedures

The analytic techniques used in all the factor analyses were the Principal Components method of factor extraction and the Varimax method of factor rotation (see Horst in the List of References for a discussion of these techniques, especially pages 156 and 418 respectively and also Kaiser). In the terminology of matrix algebra a Principal Component is similar to an eigenvector, characteristic vector or latent vector and the amount of variance accounted for by a factor is similar to an eigen value, characteristic root or latent root. The desirable feature of the Principal Components method is that it maximizes the amount of variance taken out by each factor or in other words it takes out the roots in descending order of magnitude. The factors (or vectors) obtained from a Principal Components analysis are usually not meaningful and consequently the Varimax technique is used to rotate the factors into a position which may be more meaningful. Computationally, the Varimax technique attempts to maximize the high and low factor weights (sometimes called factor loadings or vector coefficients) so that variables that have high weights for a factor can be thought of as being related to one another and hence forming a clear grouping while those that have low (or near zero weights) belong in some other grouping.

As mentioned earlier, the philosophy adhered to in using factor analysis was that meaningful groupings of variables would be sought. Initially certain variables were excluded from the factor analyses because it was felt that they were more meaningfully kept as separate variables or that they would perturb what might otherwise be a meaningful solution. Thus, the variable of sex (1), race (5), credits beyond highest degree (16), and vocabulary test score (45) were kept out of the factor analyses. In addition a number of different subsets of variables that were considered to be meaningful on the basis of a priori considerations were each subjected to a Principal Components analysis and Varimax rotation. For example, it was thought that such variables as Father's Education, Mother's Education, and Father's Occupation might form an index of socio-economic background. These preliminary analyses showed that although some of the priori groupings did form a clear and single factor many of them did not. However, the full set of variables did tend to form meaningful factors with the exception of a few variables. Thus the variables of percent white in the student body of the undergraduate institution attended (14) and percent of students in the class that are white (34) and average class size (42)

TABLE 3.-Amount and Cumulative Percent of Variance Accounted for by

36	0.1557	100.00	36	0.1404	100.00

tended to form an unwanted racial differences factor (apparently non-white teachers have more atypical or non-average class size than do white teachers). Similarly, hours spent in classroom teaching (41) and assignment to present school district (20) tended to form a factor along with size of community (4) and salary (23). This was an undesired factor since it reflected mainly rural-urban differences in school systems. As a consequence of these preliminary analyses variables 20, 34, 41 and 42 were eliminated from further analyses.

The remaining 36 variables were subjected to a Principal Component analysis. The magnitude of the roots (amount of variance accounted for by each factor) and the cumulative percent of variance accounted for by each factor are given for both ELEMENTARY and SECONDARY groups in Table 3. The percent of variance is computed by utilizing a theorem from matrix theory which states that the trace of a matrix (viz the sum of its diagonal elements) is equal to the sum of its roots. Since the diagonal elements of a correlation matrix are equal to one, the sum of its diagonal elements is equal to the number of variables in the matrix. Hence, by dividing each root by the number of variables, in this case 36, one obtains the percent of variance accounted for by the factor associated with that root.

### Results

For each group, those factors that had a root of one or greater were subjected to a Varimax rotation. These rotated factors are given in Appendix C.

Factors are interpreted by applying a suitable label to the variables that have a moderate to high weight on the factor on the basis of what they appear to have in common. Where a variable has a moderate weight on more than one factor it is considered to belong on that factor for which its membership is most meaningful. Thus, a variable belongs to one and only one factor.

If a variable were allowed to belong to more than one factor, the correlations of the factor scores would be unduly highly correlated because the same variable was entering into both factors. The analyses showed that the same factors could be obtained for both ELEMENTARY and SECONDARY teachers although the factor weights differed slightly in some instances. Some of the factors were discarded because they involved only one or two variables or, because the variable clearly belonged on another factor.

An interpretation of each factor is given below. Variables that are not listed on the factor are considered to have a zero weight on that factor. The weights that are used and presented in the following tables have been taken directly from the Varimax solution.

TABLE 4.- Teacher Index I: Experience

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
2	Age	.86	.85
17	Number of Years Teaching	.88	.88
18	Number of Years Teaching in This School	.79	.82
39	Expects to Remain in Teaching Until Retirement	.52	.39*

---

\*The asterisk for the SECONDARY group indicates that variable had a higher weight on a small factor that was later discarded.

Hereafter the interpreted factors will be regarded as indices. The first index, given in Table 4, is labeled "Experience". The variable with the highest weight is Number of Years Teaching Experience, with Age and Number of Years in this School running second and third respectively. Variable 39, Expects to Remain in Teaching Until Retirement appears to be a consequence of being older and having more years teaching experience.

TABLE 5.- Teacher Index II: Teaching Condition

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
24	Student Effort	.81	.82
25	Student Ability	.81	.81
28	Re-enter Teaching	.18*	.15*
29	Prefer Other School	-.39	-.44
33	School Reputation	.64	.72
35	School Problems: External	-.64	-.55
36	School Problems: Internal	-.69	-.67
44	Ability Grouping Taught	.29**	.16**

---

\*The asterisk on variable 28 indicates that it had a high weight on a small factor that was later discarded.

\*\*The double asterisk on variable 44 indicates that it had a higher weight on another index labeled "Teacher Preference" but it was felt that it more meaningfully belonged on the Teaching (Conditions) index.

This index has been labeled "Teaching Conditions" since almost all of the variables are concerned with the teachers view of his current teaching relationship with the student body. A teacher who has a high score on this index feels that the students in his school try hard to achieve (24), are of high academic ability (24), that the school has few problems (35, 36) and a good reputation with other teachers not employed in that school (33), that he would not prefer to teach in some other school (29), that he would re-enter teaching as a profession if he had it to do over again (28) and that he is currently teaching high ability students (44).

TABLE 6.- Teacher Index III: Localism of Background

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
3	Area Spent Most of Life	.89	.89
6	Area Graduated High School	.91	.91
13	Area of Undergraduate Institution	.77	.78

---

Index III is clearly related to the area in which the teacher has spent most of his years prior to completion of college. A teacher who has a high score on this index has moved from one area to another while a teacher with low mobility has a low index score and consequently the label "Localism of Background" has been attached to this index.

TABLE 7.- Teacher Index IV: Socio-Economic Background

<u>VARIABLE NUMBER</u>	<u>TITLE.</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
4	Type/Size of Community Spent Most of Life	.27**	.11**
7	Father's Occupational Level	.73	.75
8	Father's Educational Level	.84	.86
9	Mother's Educational Level	.76	.75

---

\*\*The double asterisk on variable 4 indicates that this variable had a higher weight on an index labeled "Training" but was considered to be more interpretable on this index.

Socio-economic status is usually conceived of as a dimension which differentiates people in a number of ways. People of high socio-economic status are usually thought to have more money, more education, different child rearing practices and outlook on life than their lower socio-economic status counterparts. Since this index has some of the major variables that are considered indicators of socio-economic status it is called Socio-Economic Background. The word background rather than status is used to indicate that this is not the teacher's current socio-economic status, for he now has educational, occupational and income levels that may be quite different from his parents, but is rather part of his social origins.

TABLE 8.- Teacher Index V: Training

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
10	Highest Degree Held	.66	.66
19	Certification	.54	.50
23	Salary	.76	.72
26	Tenure	.54	.57

A teacher with a high score on this index has a high salary (23), a higher degree (10), certification (19) and Tenure (26). Since Salary, Certification and Tenure are partly determined by the level of the degree held and partly by teaching experience this index tends to encompass training gained through formal education and through informal education such as in-service training. In view of these considerations this index has been labeled "Training". One would expect and will later see that this index is somewhat correlated with Index I: "Experience."

TABLE 9.- Teacher Index VI: College Attended

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
11	Undergraduate Institution Attended	.71	.50
12	Highest Degree Offered by Teacher's Undergraduate Institution	.73	.66
15	Teacher's Ranking of Academic Standing of Undergraduate Institution	.59	.71

---

The variables in this index all refer to various aspects of the teacher's undergraduate institution. Thus variable 11 is a rank assigned to each type of institution on the basis of the vocabulary score obtained by their alumni who went into teaching. Usually the high ranking schools are the public and private universities with the private junior colleges and teachers colleges ranking lowest. Variable 12 refers to the highest degree offered by the Teacher's Undergraduate Institution while variable 15 is the Teacher's Ranking of the Academic Standing of his Undergraduate Institution. Consequently this index is labeled "College Attended".

TABLE 10.- Teacher Index VII: Teaching Related Activities

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
22	Attends Summer Institutes for Teaching the Cultur- ally Disadvantaged	.16*	.50
37	Member of Teachers Associ- ations	.22*	.18*
38	Reads Educational Journals	.46	.37*
40	Hours a Day Spent in Classroom Preparation	.71	.60
43	Hours a Day Spent in Counseling (in addition to his official assignment)	.59	.64

---

\*The variables with asterisks indicate that they had a higher weight on other small factors which were discarded.

All of these variables refer to the preparation for teaching (40), the maintenance of teaching skills (22, 37, 38), or the performance of certain teacher related obligations (43), and consequently this index is labeled Teaching Related Activities.

TABLE 11.- Teacher Index VIII: Preference for Student Ability Level

<u>VARIABLE NUMBER</u>	<u>TITLE</u>	<u>ELEMENTARY WEIGHT</u>	<u>SECONDARY WEIGHT</u>
30	Type of High School Preferred	.65	.68
31	Socio-Economic Background of Students	.48	.39
32	Preference for High Ability Students	.68	.66

A teacher with a high score on this index prefers an academic school with a strong emphasis on college preparation (30), prefers children of white collar and professional workers (31) and prefers to teach a high ability group (32). Since all these variables are in part or whole related to the ability level of the students the index has been labeled "Preference for Student Ability Level."

The three remaining factors from the ELEMENTARY and two remaining factors from the SECONDARY groups were discarded either because the few variables that had high weights on them were already used on other factors or because there was only one or two variables on the factor and these could be more meaningfully kept as single variables rather than being weighted and given the status of an index. Of the thirty-six variables that were factor analyzed only two failed to be included in an index. These are variables 21, attends NSF-NDEA-ESEA Sponsored Summer Institutes, and Variable 27, teacher is a Member of a National Honorary such as Phi Beta Kappa.

### INDEX SCORE INTERCORRELATIONS

Scores for each ELEMENTARY teacher on each index were computed and then intercorrelated. Each variable was first standardized to a mean of zero and a standard deviation of one (using the means and standard deviations from Appendix B to subtract out and divide by, respectively). The standardized variables for each index were then multiplied by their respective ELEMENTARY weights and summed and then intercorrelated. These intercorrelations are given in Table 12 (and also in Appendix D).

TABLE 12.- Index Intercorrelations for Elementary Teachers

		I	II	III	IV	V	VI	VII	VIII
I	Experience	1.00	.06	-.15	-.30	.33	-.16	.12	-.08
II	Teaching Conditions	.06	1.00	.00	.06	.03	.03	-.01	.10
III	Localism	-.15	.00	1.00	.09	.01	.09	.03	.01
IV	Socio-Economic Background	-.30	.06	.09	1.00	.00	.19	-.04	.15
V	Training	.33	.03	.01	.00	1.00	.07	.08	.04
VI	College At- tended	-.16	.03	.09	.19	.07	1.00	-.02	.12
VII	Activities	.12	-.01	.03	-.04	.08	-.02	1.00	-.10
VIII	Preference	-.08	.10	.01	.15	.04	.12	-.10	1.00

Inspection of Table 12 shows that the index intercorrelations are what one might expect on the basis of the variables that comprise them. Thus, one would expect that the older, more experienced teachers (I) would tend to be more local in their background (i.e. moved around less), would have lower socio-economic origins (IV), would have more training (V), went to a less highly ranked college (VI) and engage in more teaching related activities (VIII) than their younger, less experienced counterparts.

"Teaching Conditions" (II) is virtually uncorrelated with all the other indexes except "Preference for High Ability Students" (VIII). This is meaningful in that the teacher who is in a favorable teaching situation tends also to prefer high ability students.

The negative relation of "Socio-Economic Background" (IV) to "Experience" (I) probably is due to an historical trend. Since Fathers and Mothers Educational Levels are used to define Index IV and since there has been a general increase in the level of education in the adult population in recent years, one would expect the younger teachers to have more highly educated parents than the older teachers. "Socio-Economic Background" (IV) is also related to rank of "College Attended" (VI) and "Preference for High Ability Students" (VIII).

The objective of this analysis was to reduce the number of variables in a meaningful way. This has been accomplished and the same time the index scores have low intercorrelations. However--when the index scores are correlated these correlations can be given a meaningful interpretation.

#### CORRELATIONS OF ELEMENTARY TEACHER INDICES WITH VARIABLES ELIMINATED FROM THE ANALYSIS AND SPECIAL STUDIES VARIABLES

Nine of the forty-five original variables were eliminated from the factor analyses on the basis of the preliminary analyses or because they were intended to be kept separate in order to perform special studies and analyses later on. Also, two variables that were included in the analyses did not have a substantial weight on any of the indices. These eliminated variables were correlated with the indices. In addition, some special variables also used in the indices were selected out to be used in special studies. Some of these special variables are sex, age, race, salary, verbal score etc. These correlations are given in Table 13 as well as in Appendix D (along with the intercorrelations of these variables).

TABLE 13.-Correlations of Elementary Teacher Indices with  
Selected Other Variables

VARIABLE NUMBER	TITLE	Index Number and Title							
		EXPERIENCE	TEACHING COND.	LOCALISM	SOCIO-ECON BACKGROUND	TRAINING	COLLEGE ATTENDED	ACTIVITIES	PREFERENCE
		I	II	III	IV	V	VI	VII	VIII
1	Sex	.14	.07	-.04	.03	-.09	-.03	.00	-.02
2	Age	.89	.06	-.09	-.27	.26	-.12	.10	.02
5	Racial-Ethnic Difference on Vocabulary Test	-.02	.22	.05	.16	.01	.19	-.18	.16
14	Percent White at Undergraduate Institution	.02	.19	.05	.13	.01	.16	-.18	.15
16	Credits Beyond Highest Degree	.20	-.05	.06	.02	.28	.08	.11	-.01
20	Assignment to Present School District	.09	.05	-.03	-.07	-.03	.01	-.01	.00
21	Attends NSF-NDEA-ESEA Summer Institutes	.03	-.04	-.01	-.02	.05	.00	.09	-.02
23	Salary	.31	.02	.08	.02	.79	.08	.02	.03
27	Member National Honorary	.03	.03	.04	.05	.09	.05	.08	.06
34	Percent White of Teacher's Students	.00	.38	.04	.09	-.04	.10	-.12	.16
41	Hours/Day Spent in Classroom Teaching	-.08	-.01	.00	.08	.07	.04	-.10	.02
42	Average Class Size	-.12	.06	.03	.09	.01	.06	-.03	.07
45	Contextual Vocabulary Score	-.07	.09	.06	.20	.12	.19	-.13	.16

Inspection of Table 13 shows that variables that are used to form part of an index are highly correlated with that index. Thus, it to be expected that Age (2) would be highly correlated with the "Experience" index (I) and Salary (23) with the "Training" index (V). As a rule of thumb correlations of .10 or less will not be discussed. Sex (1) is related slightly to "Experience" (I) which indicates that slightly more of the older, more experienced teachers are women than are their younger counterparts. Since Age (2) is used in the "Experience" index (I) it will be correlated with other indices that are also correlated with the Experience index (I). The correlations that are of major interest are those between the racial difference variables (5, 14, 34) and the indices. Thus, Racial-Ethnic Differences (5), Percent of White Students at the Teachers Undergraduate Institution (14) and, Percent of Teachers Students that are White (34) are all correlated with the indices of "Teaching Situation" (II), "Socio-Economic Background" (IV), "College Attended" (VI), "Teaching Related Activities" (VII) and "Preference for High Ability Students" (VIII). What these correlations indicate is that white teachers tend to teach in predominantly white institutions (see Table 2) which they consider to be a more favorable Teaching Condition" (II), white teachers have a higher "Socio-Economic Background" (IV) than their non-white counterparts, white teachers tended to attend higher ranked undergraduate institutions (VI) and are less involved in "Teaching Related Activities (VII) than their non-white counterparts. Also white teachers tend to prefer higher ability students who in turn happen to be predominantly white (see Coleman in the List of References for documentation of this point).

Still other meaningful correlations are between variable 16, Credits Beyond Highest Degree and "Experience" (I), "Training" (V) and "Teaching Related Activities" (VII). Average Class Size (42) is negatively related to "Experience" (I) which indicates that the older, more experienced teachers tend to have larger and smaller classes than do the younger teachers. The correlations of the contextual Vocabulary Score (45) with "Socio-Economic Background" (IV), "Training" (V), "College Attended" (VI), "Activities" (VII) and "Preference" (VII) indicates that the higher scoring teachers tend to have a higher Socio-Economic Background, more Training, attended a higher ranking college, are less heavily involved in Teaching Related Activities and have a greater Preference for High Ability students than do the lower scoring teachers.

### CONCLUSIONS

This study attempted to reduce the number of items from the Educational Opportunities Survey Teacher Questionnaire in an empirically meaningful way, so that the volume and complexity of later analyses could be reduced. In order to accomplish this objective 45 variables from the teacher

questionnaire were first intercorrelated and then factor analyzed. Separate analyses were run for ELEMENTARY and SECONDARY teachers.

Some of the more salient correlational results are that: age, size of community in which the teacher spent most of his life, highest degree held, number of credits beyond highest degree, years of teaching experience, years teaching in present school, certification, employment status and plans to teach until retirement are moderately correlated with the teachers salary for both elementary and secondary teachers. Correlational analysis also showed that: racial-ethnic differences, percent of white students at the teacher's undergraduate institution, teacher's rating of student effort and academic ability, few number of school problems cited and teacher's score on a vocabulary test are moderately related to the percent of white students in the teacher's class for both ELEMENTARY and SECONDARY teachers.

Principal Components analyses of the intercorrelations and Varimax rotations of the factors yielded eight meaningful factors that were highly similar for both ELEMENTARY and SECONDARY teachers. The factors were interpreted and given the status of indices. The indices and the weights were compared for both groups of teachers. These weights are so similar that it is recommended that a single set of weights be used to obtain index scores for both groups. The weights for elementary teachers are suggested as the appropriate set.

The indices and their interpretive titles are:

- I Experience
- II Teaching Conditions
- III Localism of Background
- IV Socio-Economic Background
- V Training
- VI College Attended
- VII Teaching Related Activities
- VIII Preference for Student Ability Level

Index scores were computed and intercorrelated for ELEMENTARY teachers. These correlations were low in magnitude and could be meaningfully interpreted.

Correlations of other variables with the indices showed that: racial-ethnic differences, percent of white students at the teachers undergraduate institution and percent of teacher's students that are white were correlated with the indices of "Teaching Conditions" (II), "Socio-Economic Background" (IV), "College Attended" (VI), "Teaching Related Activities" (VII) and "Preference for High Ability Students" (VIII).

Similar analyses will be forthcoming for students and principals.

Item Means, Standard Deviations and Intercorrelations from the  
Teacher Questionnaire for Elementary (K-8) and Secondary  
(9-12) Teachers

### ELEMENTARY

The variable numbers and titles are as follows:

1. Sex
2. Age
3. Area Spent Most of Life
4. Type/Size of Community Spent Most of Life
5. Racial-Ethnic Difference on Contextual Vocabulary
6. Area Graduated from High School
7. Father's Occupational Level
8. Father's Educational Level
9. Mother's Educational Level
10. Highest Degree Held
11. Undergraduate Institution Attended
12. Highest Degree Offered by Undergraduate Institution
13. Area of Undergraduate Institution
14. Percent of White Students at Undergraduate Institution
15. Ranking of Academic Level of Undergraduate Institution
16. Credit Beyond Highest Degree
17. Years of Teaching Experience
18. Years of Teaching in Present School
19. Certification
20. Assignment to Present School District
21. Attend Summer Institutes
22. Attend Summer Institutes for Culturally Disadvantaged
23. Annual Teaching Salary
24. Student Effort
25. Student Ability
26. Employment Status
27. Member National Honorary
28. Re-enter Teaching
29. Prefer Other School
30. Type High School Preferred
31. Socio-Economic Background of Student Preferred
32. Preference for Student Ability
33. School Reputation
34. Percent White of Teacher's Students

## APPENDIX D

### Index and Selected Variable Intercorrelations for Elementary Teachers\*

\*In these analyses, the records of all teachers who did not give a response for their sex and/or age were eliminated from all correlations. In addition, the OMITS on variables 30 and 32 were assigned a value of 1 and the OMITS for variable 43 were given a value of 0. Also, eliminated were schools with a zero weight. Consequently the estimated number of teachers is about 24,000 less than in Appendix B.

### ORDER OF VARIABLES

1*	I:	Experience
2	II:	Teaching Conditions
3	III:	Localism
4	IV:	Social-Economic Background
5	V:	Training
6	VI:	College Attendance
7	VII:	Activities
8	VIII:	Preference
9	1**	Sex
10	2	Age
11	5	Race
12	14	% White Undergraduate
13	16	Credits Beyond Highest Degree
14	20	Assignment to Present School
15	21	NSF etc. Summer Institution
16	23	Salary
17	27	Member National Honorary
18	34	% White Teachers Students
19	41	Hours/Day Teaching
20	42	Average Class Size
21	45	Vocabulary Score

\*These numbers represent the ordering of the variables on the following sheet.

\*\*These numbers represent the variable numbers from the List of Variables.
